

SNS COLLEGE OF TECHNOLOGY

(An Autonomous Institution)

Approved by AICTE, New Delhi, Affiliated to Anna University, Chennai

Accredited by NAAC-UGC with 'A++' Grade (Cycle III) &

Accredited by NBA (B.E - CSE, EEE, ECE, Mech & B.Tech.IT)

COIMBATORE-641 035, TAMIL NADU

COURSE NAME : 19CSE301-INTRODUCTION TO DATA SCIENCE

III YEAR/ V SEMESTER

UNIT – I DATA SCIENCE LIFE CYCLE

Topic: Sorting

Ms.B.Sumathi

Assistant Professor

Department of Computer Science and Engineering

Sorting

The SQL ORDER BY clause is used to sort the data in ascending or descending order, based on one or more columns. Some databases sort the query results in an ascending order by default.

Syntax:

- The basic syntax of the ORDER BY clause which would be used to sort the result in an ascending or descending order is as follows –

```
SELECT column-list
```

```
FROM table_name
```

```
[WHERE condition]
```

```
[ORDER BY column1, column2, ..... columnN] [ASC | DESC];
```

Example-Sorting

For example – [3,4,2,0,78,11]

- the elements in this array are not in order, after applying sorting the data becomes – [0,2,3,4,11,78].
