SOLUTION OF TWO DEMENSIONAL WEAT FLOW EQUATION The two dimensional heat flow equation is

 $\frac{\partial^2 U}{\partial x^2} + \frac{\partial^2 U}{\partial y^2} = 0$ 

The posseble solutions of two dimensional heat equation is

- (i) uca, y) = (Ae m + Be-PM) (c cospy + D slapy)
- (ii) u(x,y) = (A cospx+Bsinpx) (cepy+De-py)
- (iii) u(x,y) = (Ax+B) (cy+D)

The suitable soln is Type I Heat flows in x direction worned

u(ny)= (A cospx+Bsinpx) (ce 14 De 14)

The boundary collins: are:

- i) u(0,y) = 0
- ii) u(1,4)=0
- m) u(x,0) =0
- iv) u (xxx L) = f(xx) . oxxxl.

A square plate & bold by the lines x=0, y=0. n=20 and y=20. Its faces are insulated. The temp. along the upper horizontal edge is gn. by (11,20) = x (20-x) when 0<x<20 while the other three edges are kept at oc. Find the steady state temp. In the plate
