

SNS COLLEGE OF TECHNOLOGY

Coimbatore-35

An Autonomous Institution

Accredited by NBA – AICTE and Accredited by NAAC – UGC with ‘A++’ Grade

Approved by AICTE, New Delhi & Affiliated to Anna University, Chennai

DEPARTMENT OF COMPUTER APPLICATIONS

23CAT702 – MACHINE LEARNING

II YEAR III SEM

UNIT II – LINEAR MODELS

TOPIC 13 – Logistic regression

What is Regression?

Logistic regression: What and Why?

Linear Vs Logistic Regression

Use- Cases

Demo

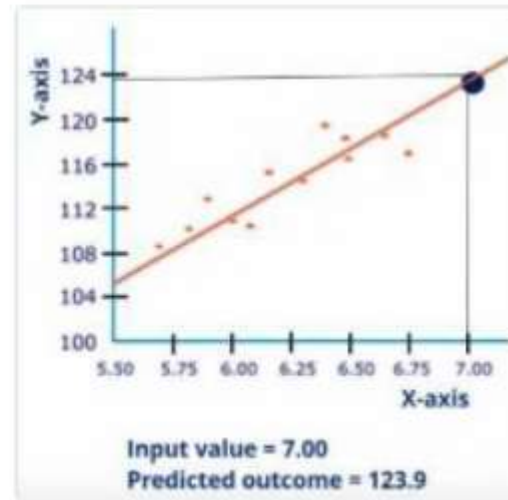

What is Regression?

Regression Analysis is a predictive modelling technique

It estimates the relationship between a dependent (target) and an independent variable (predictor)

Logistic Regression: What And Why?

Logistic Regression produces results in a **binary** format which is used to predict the outcome of a categorical dependent variable. So the outcome should be **discrete/ categorical** such as:

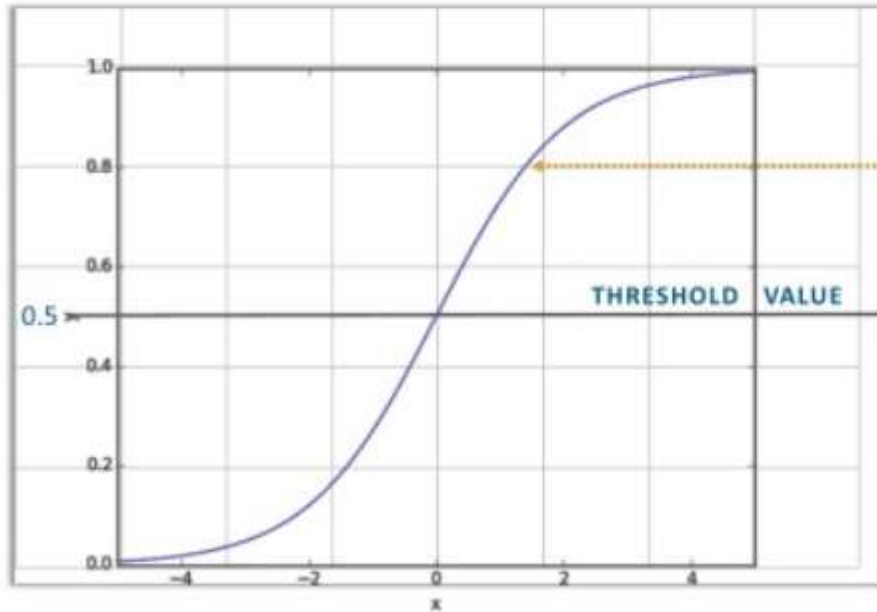

Logistic Regression Curve

The Sigmoid "S"
Curve

Logistic Regression Curve

With this, the threshold value indicates the probability of winning or losing

Logistic Regression Equation

The Logistic Regression Equation is derived from the Straight Line Equation

Equation of a straight line

$$Y = C + B_1X_1 + B_2X_2 + \dots$$

Range is from $-(\infty)$ to (∞)

Let's try to reduce the Logistic Regression Equation from Straight Line Equation

$$Y = C + B_1X_1 + B_2X_2 + \dots$$

In Logistic equation Y can be only from 0 to 1

Now, to get the range of Y between 0 and infinity, let's transform Y

Y	Y = 0 then 0
1-Y	Y = 1 then infinity

Now, the range is between 0 to infinity

Let us transform it further, to get range between $-(\infty)$ and (∞)

$$\log \frac{Y}{1-Y} \rightarrow Y = C + B_1X_1 + B_2X_2 + \dots$$

Final Logistic Regression Equation

Linear Vs Logistic Regression

Linear Regression

1 Continuous variables

2 Solves Regression Problems

3 Straight line

Logistic Regression

1 Categorical variables

2 Solves Classification Problems

3 S-Curve

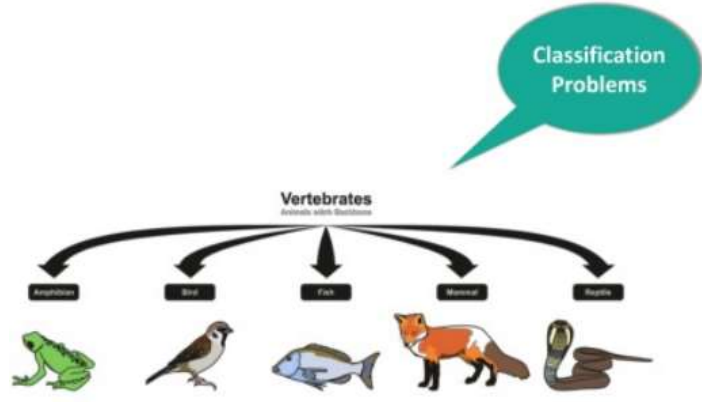

Logistic Regression: Use - Cases

Weather Predictions

Determines Illness

Implement Logistic Regression

Implement Logistic Regression

➤ Collect Data: Import Libraries

```
In [33]: import pandas as pd
import numpy as np
import seaborn as sns
import matplotlib.pyplot as plt
import math
%matplotlib inline

titanic_data= pd.read_csv('Titanic.csv')
```

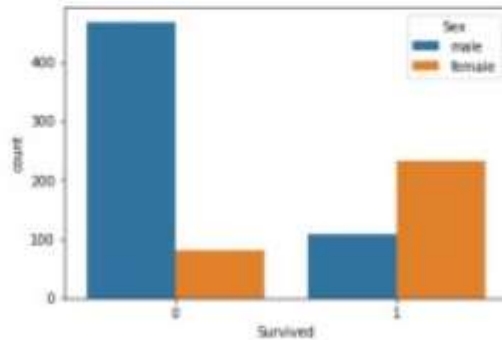

Implement Logistic Regression

Analyzing Data

Creating different plot to check relationship between variables

Implement Logistic Regression

Analyzing Data

Creating different plot to check relationship between variables

Implement Logistic Regression

Clean the data by removing the Nan values and unnecessary columns in the dataset

	Survived	Age	SibSp	Parch	Fare	male	Q	S	2	3
0	0	22.0	1	0	7.2500	1	0	1	0	1
1	1	38.0	1	0	71.2833	0	0	0	0	0
2	1	26.0	0	0	7.9250	0	0	1	0	1
3	1	35.0	1	0	53.1000	0	0	1	0	0
4	0	35.0	0	0	8.0500	1	0	1	0	1

Implement Logistic Regression

Build the model on the train data and predict the output on the test data

```
logistic = LogisticRegression()  
logistic.fit(train_X,train_Y)
```

Implement Logistic Regression

Calculate accuracy to check how accurate your results are.

```
from sklearn.metrics import accuracy_score
accuracy_score(y_test,predictions)*100
```

What is regression?

Logistic: What & Why?

Linear VS Logistic

Use - Cases
