

Bounded lattice:
A lattice which has both ~~#~~ '0' element and '1' element is called an bounded lattice. It is denoted by $(L, \wedge, \vee, 0, 1)$.

UNIT 5- LATTICES AND BOOLEAN ALGEBRA

Lattices as algebraic systems

Complement of an element :

In a bounded lattice $(L, \wedge, \vee, 0, 1)$, an elt. $b \in L$ is called a complement of $a \in L$, if

$$a \wedge b = 0$$

$$a \vee b = 1$$

Complemented lattice: $a \wedge b = 0$ & $a \vee b = 1$

A lattice $(L, \wedge, \vee, 0, 1)$ is said to be complemented lattice if every elt. of L has at least one complement.

Complete Lattice :

A lattice (L, \wedge, \vee) is said to be complete lattice if every non empty subsets of L has both G.L.B & L.U.B.

Eg: $(P(A), \subseteq)$

modular lattice :

A lattice (L, \wedge, \vee) is said to be modular lattice, if it satisfies the following condition

$$M_1: \text{ If } a \leq c \text{ then } a \vee (b \wedge c) = (a \vee b) \wedge c, \forall a, b, c \in L.$$

1. Check the given lattice is the complemented lattice or not.

Now

$$a \wedge b = a \neq 0$$

$$a \vee b = b \neq 1$$

$\Rightarrow b$ is not the complement of a .

and $b \wedge c = a \neq 0$

$$b \vee c = 1$$

$\Rightarrow b$ is not the complement of c .

\therefore It is not a complemented lattice.
